Carver's Pattern Explanation

This is what you see on the carver's pattern view (2D pattern) that we provide you.

Carvers Pattern view is designed to help with the 3D effect. This is the desired effect that we are looking for when you are doing this project. The depth is up to you. All we are doing is explaining to you the elevation change and the contours of the project.

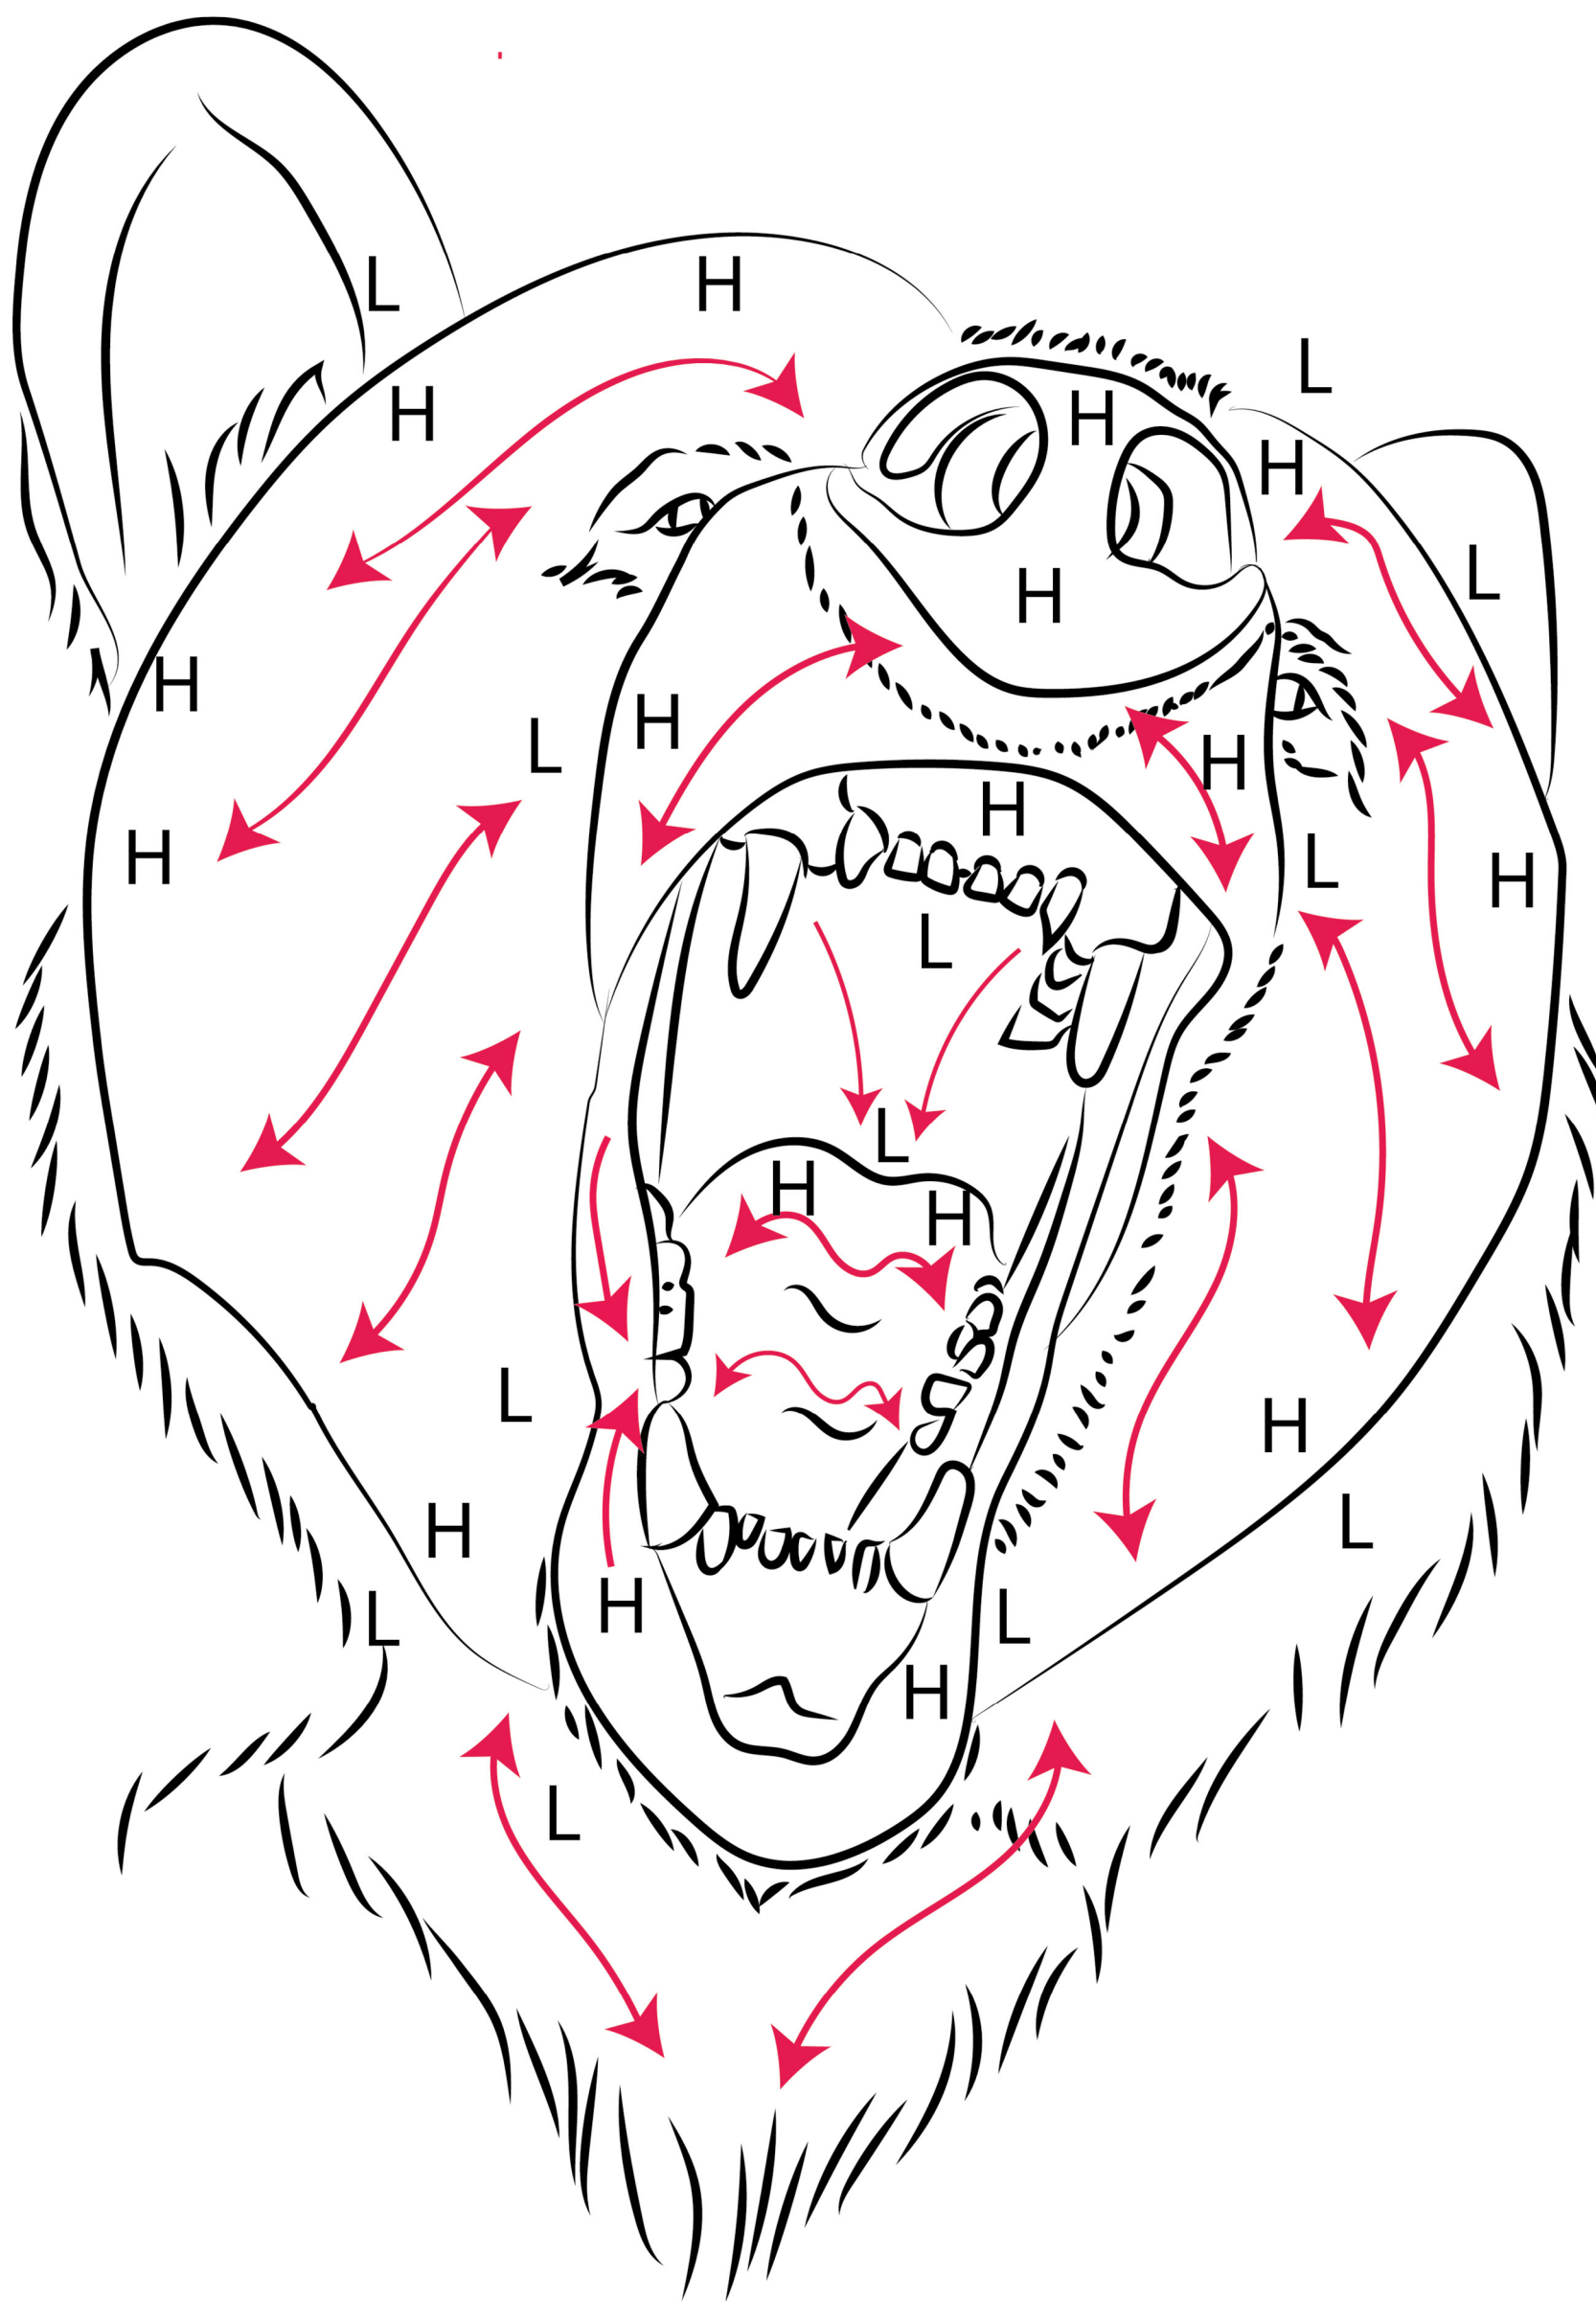

Side view of the carvers pattern. The idea of the H and L is to provide you with a perspective of what is required above and what is required to be below the pattern line. By doing this we try to provide you the carver with a 2D view and an understanding of the 3D effect that is required for this project.
